Generic Bill of Materials

For Basic level of certification, all generic materials must be identified (eg. molded PET, cast aluminum, paint, etc).

For products that are themselves primarily a single homogenous material, formulation ingredients should be included at the Basic level.

Note: Assessor reserves the right to request analytical testing of specific materials if warranted and may conduct random analytical testing as a means of data verification.

Items required at
BASIC level

General material information

Material reutilization

Supplier Information

| Part Number | Generic Material | Part Name/Function (indicate alternates - [ALT]) | Exact material specification/trade name/product number | Part weight (UNITS: _kg_) | Number of parts | Total Weight of material in product | Percent of Total Product Weight | Meets Requirements of Banned List(s) | Is the material recyclable or biodegradable? | % Recycled/rapidly renewable Content | Recycled/rapidly renewable content description | Is this part intended to be an EMC? | Nutrient Type (biological - BN or technical - TN) | Do connections permit easy disassembly? | Supplier Name | Supplier Contact Name | Supplier Location | Supplier Email | Supplier Phone |
